IntelliTagger 1.0.2

Speed up tagging tiddlers using tag autocompletion and correction, tag suggestions and context sensitive tag guessing, "Edit Tags only" mode and many more. Especially when you are working with a lot of tags this is the plugin you are looking for.

Tutorial

After you have installed the plugin IntelliTagger will always be there when you want to edit the tags of your tiddlers.

Just give it a try. Open any tiddler for editing and click into the Tags field. This will automatically open the main IntelliTagger window, as shown in the following picture.

The IntelliTagger Window shows a list of „tag suggestions". The list is adapted to your current situation, e.g. it depends on what tags are already in the „Tags" field, what you have typed so far, what other tags exist in the TiddlyWiki and some more. In the simplest case it lists you all tags that are currently used in the TiddlyWiki (like in the example above).

Click to select tag

You can click a tag in the tag suggestion list to add it to the „Tags" field, or to remove it from the „Tags" field, like the „welcome" in the example.
Use Keyboard Shortcuts to select tag

You may also use the keyboard to select one of the first tags listed in the window. E.g. the first tag in the list (here "adaptions") can be selected with a „Ctrl-Space" keystroke. In addition pressing „Alt-*digit*" (e.g. „Alt-4) will choose the tag with that number (e.g. "4) community").
Use Tag Filtering

If you start typing text into the Tags field the tag suggestions list will only display tags that contain the typed text. This way you can quickly get a shorter list of suggestions that makes it easy to choose from.

Here a little example: Assume you type an „s" into the Tags field. The tag suggestions will change to this:

And if you continue and type an „y" the list just contains one word:

Now you can just type „Return" or „Alt-1" to select the systemConfig tag.

## Tag Suggestion and Correction

You don't need to take care of the character case. Typing „sy" would also find „Symmetry" or „WorldSystem".

IntelliTagger will also correct your typing when a tag is selected. E.g. if you typed „sy" and and select „Symmetry" your typed (lowercase) text will be replaced by „Symmetry".

So you don't need to recall the correct spelling of a tag when working with IntelliTagger, and you can ignore the „Shift" most of the time.

Getting Information About a Tag

If you Shift-Click a tag in the list you can see all other tiddlers that are using this tag.

This may be useful e.g. to decide if a certain tag „is appropriate" for this tiddler by looking at the context it was used already. Or you may use the „Open tag '...'" option to read the

tag's description if the tag has an own tiddler.

Adding new Tags

Of cause you can still type in new tags into the Tags field, as if IntelliTagger is not installed. These new tags will automatically be added to the tag suggestions list.

Tag Guessing

If you are using tags intensively you will benefit a lot from IntelliTagger's „Tag Guessing" feature.

IntelliTagger analyses the tiddler you are currently working on and tries to „guess" what tags you may want to add to the tiddler. If it comes up with some guesses it displays those tags in the „Tag Guesses" area above the „normal" tag suggestions.

E.g. if you have already added the tag „troubleshooting" to the tiddler IntelliTagger will look for other tiddlers with that tag and tries to find out if there are „interesting" tags used by those other tiddlers.

The Tag Guesses list is sorted by „importance", i.e. those tags that are more likely to be added are listed first.

You will notice that tag guessing will getting better and better the more your are using tags in your tiddlers. And you may be encouraged to use more than just one tag per tiddler.

Edit Tags Only

When viewing a tiddler the „tags:" list now also contains an „[edit]" button.

Pressing this „edit" button opens the „Tags" field and the IntelliTagger window, so you can edit the tags. But the other parts of the tiddler (like title and content) are left unchanged:

This way it is much easier to read the content of the tiddler and decide what tags may be appropriate.
